

Mohamed Faizallah

Full-Stack Developer - React, TypeScript, Rust

Tunis, Tunisie | 100% remote | +216 23 09 10 15

mohamed.faizallah@gmail.com | linkedin.com/in/mohamed-faizallah | mohamedfaizallah.github.io

Profile

Full-stack developer focused on practical business web apps: APIs, dashboards, authentication, admin panels, payments, file handling and automation. I like building the whole flow, not just isolated screens: data model, backend routes, frontend state, UI details and the small tools that make a product usable.

I work like an owner: I sweat the details, keep a clean and intentional Git history, and treat optimization and polish as part of the job, not an afterthought. Looking for a 100% remote role where I can contribute on both frontend and backend.

Technical Stack

Frontend: React, TypeScript, Vite, Tailwind CSS, Redux Toolkit, RTK Query, responsive dashboards, forms.

Backend: Rust APIs, REST, authentication, JWT/OAuth flows, role-based access, SSE/real-time updates, file upload.

Data / infra: MongoDB / SQL depending on project, Redis caching, Docker, Nginx, Git, environment configuration.

Business tools: PHP, JavaScript, Dolibarr, Shopify GraphQL/REST, marketplace integrations, CSV/PDF/Excel automation.

Experience

Full-Stack Developer | Independent / Self-Driven Products

2025 - Present

- Design and ship full applications end to end: data model, Rust/REST APIs, React + TypeScript dashboards, authentication, file handling and automation.
- Treat every commit like production: clean, intentional Git history, readable code and care for the small details that make a product feel finished.
- Obsess over optimization: profile, refactor and tune performance, UX and code clarity instead of stopping at "good enough".
- Take full ownership of each feature: understand the requirement, build it, then keep enhancing and polishing it until it is genuinely solid.

Selected Projects

ProLancer - Freelance Marketplace & Training Platform for Tunisia

Founder / Full-stack project | Mar 2026 - Jun 2026

- Full-stack marketplace connecting companies, freelancers and trainers, built for a market where Stripe and PayPal are unavailable.
- Designed a bank-transfer escrow system (references, admin validation, wallet/ledger payouts) as the trust layer in place of a card gateway.
- Money in integer millimes with one canonical TVA 19% / commission model across catalogue, checkout, wallets and invoices.
- Training platform with quizzes, certificates and server-enforced paid-content access; automated PDF invoices, contracts and certificates.

Tech: Rust (actix-web), MongoDB, Redis, React, TypeScript, RTK Query, SSE, JWT.

TicketApp - High-Concurrency Sports Ticketing & Gate Scanning Platform

Backend & full-stack project (client) | Nov 2025 - Feb 2026

- Sports ticketing platform with a Redis-backed virtual waiting-room queue and atomic, per-seat ticket purchasing with unique QR tickets.
- Double-entry wallet ledger with idempotent credits reconciling to the cent; gate scanning, dashboards, analytics and payouts.
- Load-tested with k6 to 50,000 concurrent fans: sub-100 ms (p95) queue reads, zero overselling or double-charging.
- Fixed two launch-blocking concurrency bugs and tuned auth/indexes to run on a single 4 vCPU / 8 GB server.

Tech: Rust (Actix-web), MongoDB (transactions), Redis, React, TypeScript, k6, JWT, PDF generation.

Linkora - Recruitment CRM and Candidate Pipeline

Personal full-stack project | Sep 2025 - Nov 2025

- Built a recruitment CRM covering candidates, companies, clients, agents, managers, objectives and admin users.
- Implemented candidate records with CV upload/download, technical folders, skills, salary, availability, mobility and visa process information.
- Created LinkedIn import review/conversion flows, client personas, campaign modules and analytics screens.
- Worked on role-based permissions, profile management, notifications and deployment-ready frontend configuration.

Tech: React, TypeScript, Redux Toolkit, Rust backend, SendGrid integration, file upload, Docker, Nginx.

BATIQAD - Construction Company Website

Frontend project | Aug 2025 - Sep 2025

- Delivered a responsive company website with landing page, services, sectors, project gallery, process and contact sections.
- Structured services and projects as reusable data files, making the site easier to maintain without touching layout code.
- Built reusable components for hero, header, footer, cards, project modal and brand-focused presentation.

Tech: React, Vite, JavaScript, Tailwind CSS, reusable components, responsive UI.

Education & Languages

Education: Licence, Network and System Administration / Administrator - Institut superieur d'informatique (2013 - 2016)

Languages: French, English, Arabic

Remote work: Comfortable with async communication, written updates, Git-based collaboration and timezone-flexible work.
